

## **Electrimotion Wireless shut off FAQ:**

- How far past the finish line will the system shut off my car?

Approx 400ft

- Will radio frequency from the device mess up my ignition or computer?

The device is a receiver only. It does not transmit!

- Can the device be set off by cell phones, CB radios, or TV cameras?

The receiver is looking for a specific frequency with a specific message on it. Similar to a cell phone's phone number.

- Why shouldn't I mount it on the front of the car?

The car acts as a shield. Hi frequency radio waves travel in a straight line. They cannot get to the receiver on back of car until the car passes the transmitter.

- When I see on TV chutes come out when they are not supposed to, what causes that?

All cases so far have been installation problems:

Cut wires

Smashed wires

Unplugged tethers

Un-authorized cable end replacement

- Should the antenna point up or down?

Down

- Can I run the system anywhere?

Only at tracks that have the transmitters set up.
