

RF Shut Off Track Overview.

The Electrimotion wireless shut down system will be located **past the finish line (approx 1400-1450ft)** at all national events. When a car enters the RF field past the finish line the Safety Box will be wirelessly activated. In the event that a car smokes the tires, the driver can turn off 12v power in the car and disable the system, which will allow the car to coast off the track.
